## Executive Summary

The Village of Brookfield Community and Economic Development Summer 2017 Intern conducted an analysis to assess the feasibility of a dog park in the community. According to the American Kennel Club, a dog park is a public, typically fenced park where people and dogs can play together. These parks offer dogs off-leash play areas where the dogs and their owners can enjoy socializing with other canines and owners. In previous years, and throughout the development process of the Brookfield Open Space Plan, many residents have expressed a great interest in having a dog park in their community. This study was in response to a recommendation from the Brookfield 2014 Open Space Plan to offer solutions to improve the local parks system to meet national park guidelines. Specifically, the Open Space Plan calls for an assessment of whether a dog park is still desired by the community, a list of potential locations, and if it was feasible.

While there has been general interest in a dog park by the community, this study goes further to examine if a dog park would be feasible. Background research was conducted about what elements successful dog parks have, including agility equipment, fountains, and waste stations. A community survey was conducted to determine the level of interest currently, and to see what elements of a park participants are interested in, as well as holding a public open house. Many participants are dog owners and would like a dog park in Brookfield.

In addition, the feasibility analysis addressed typical dog park construction and operating costs. Accordingly, an analysis of cost was done for materials, construction, equipment, and maintenance. The estimated cost for a fenced-in, 1-acre sized park with some agility equipment would cost around \$32,000 (excluding land assembly costs). Based on these factors, recommendations were provided, and determined that a dog park would be feasible in the Brookfield community if funding is obtained at a later date.

Implementing a dog park would provide both Brookfield residents and non-residents a place where they can take their pet to play, socialize, and exercise. Healthier, happier dogs create better neighbors and lower noise, conflict, and destruction. Dog parks also promote responsible pet ownership, and provide the opportunity for pet owners to get to know each other. Dog owners add to the vibrancy and safety in a community when they are out walking their dogs and being a part of the neighborhood, as described in *For the Love of Cities*. A dog park would enhance the quality of life in Brookfield, creating another innovative amenity in the community.

# Planning Process

## Timeline

This exploratory study was a summer project for Village Community and Economic Development Intern in 2017. A complete timeline can be found on the first page of this Appendix.

## Survey Results

A public survey was launched in mid-June 2017. The Brookfield Dog Park Feasibility Survey consisted of 17 questions on demographics, interest, and preferences. Survey questions were designed to gain a better understanding of the demand for a dog park, and what residents were looking for in a park. In addition, this survey asked if respondents were interested in serving on a volunteer committee for a dog park. The survey was posted on the Village e-News webpage, Special Events Facebook page, available at the open house, and advertised on a banner in the Village Hall lobby. The survey was open for 3 weeks, from June 23 through July 14, 2017. Throughout this time, 380 responses were recorded.

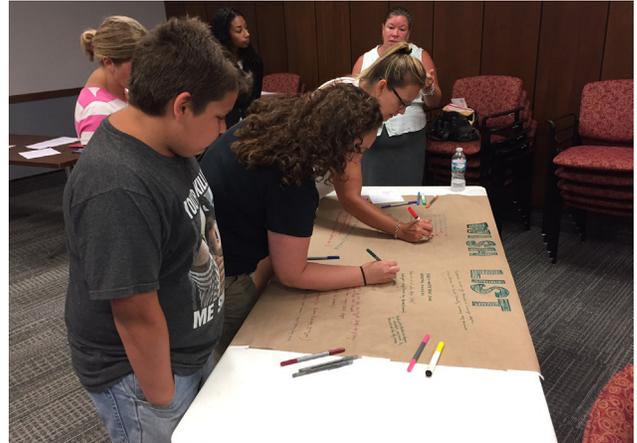

The average participant was **female** between the ages of **35-44** living in the area code **60513**

**89%** of participants own a dog and **88%** would like a dog park in Brookfield

**86%** of participants said that they would pay an annual user permit fee. **36%** would pay up to \$20 for the permits.

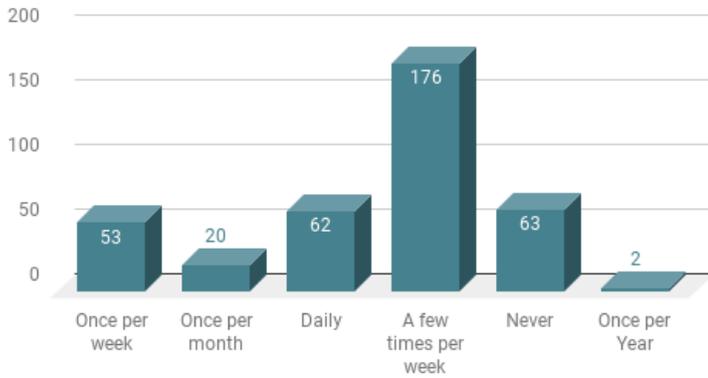

## Public Meeting

On July 12, a public open house was held at Village Hall, for community participation in the exploratory study. Information about the study was shared including a timeline, and progress of the study. The format of the open house was interactive participation, with four stations set up around the room. Paper, markers, stickers, and pens were provided for participants to voice their opinions about a dog park in Brookfield on a poster, and locate a possible site with a sticker on a map of the Village.

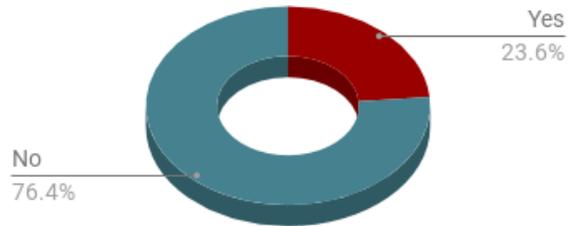

One table was labeled as a “wish list,” or features that were important to them in a dog park. These included having a double-gate entry, separate area for small dogs, waste stations, user fees/permits, shade, benches, water fountains, and away from traffic. Size and cleanliness were the most cited features. Another station was labeled as “challenges and concerns,” which included location, funding source, liability, waste station replenishment, small size, and cleanliness. Overall, the meeting was well attended (over 15 residents of Brookfield were in attendance along with non-residents) with both dog owners and non-owners participating and providing useful, concrete feedback to Village staff to aid research in this project.

### How often would you use this dog park?

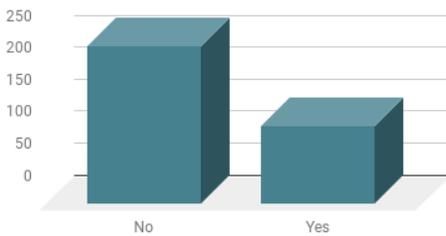

When asked how often they would use a dog park in Brookfield, most participants responded that they would use it at least a few times per week.

### Experienced Off Leash Conflict

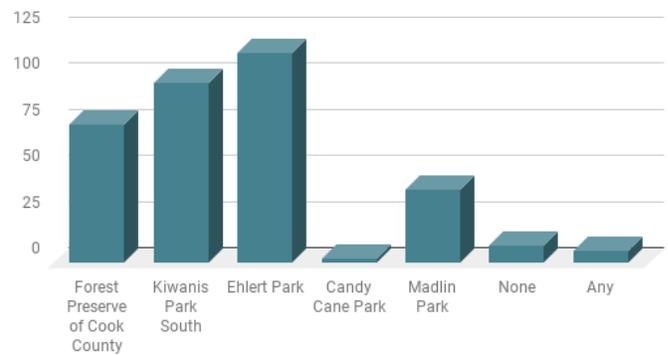

24% of participants have experienced an off-leash dog conflict in Brookfield or surrounding community.

### Serve on Volunteer Committee

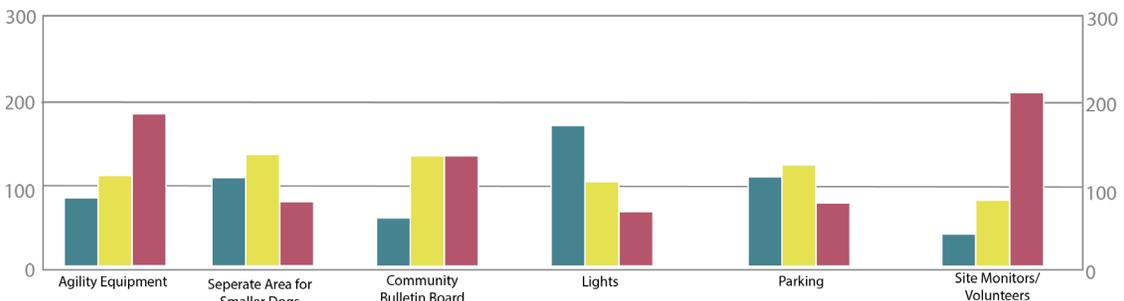

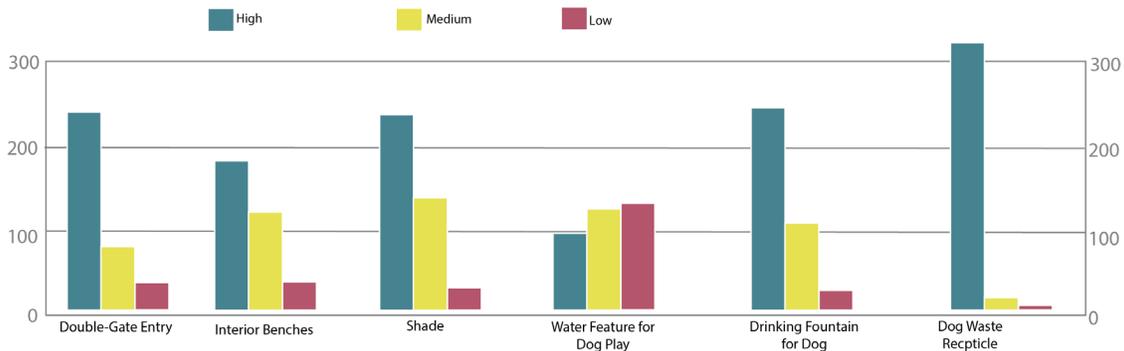

33% of participants would serve on a volunteer committee.

### Location of Dog Park

The top three locations for a dog park in Brookfield are Jaycee- Ehler Park, Kiwanis Park South, and Forest Preserve District of Cook County.

When asked to rate the importance of features, participants responded how important each feature was to them. Many people rated a double-gate entry as high importance, and many people rated that site volunteers were of low importance to them.

# Best Practices

There are many important factors that need to be taken in to consideration when developing a dog park. To determine if a dog park is feasible in Brookfield, features like location, construction, maintenance, cost, and rules need to be closely examined. Evaluating the successes and challenges of other municipalities' off-leash dog areas, including neighboring cities to Brookfield, and parks across the country help shape the choices taken into consideration for Brookfield.

## Size

According to the American Kennel Club, an ideal off-leash dog park should be at least 1 acre in size to allow for multiple dogs to play and socialize. A dog park should also have fence that is four- to six-feet in height, with a double-gate entry to keep dogs from escaping, or being intimidated by other dogs when they enter the park. These, along with other recommendations can be found in their guide, *Establishing a Dog Park in Your Community* (American Kennel Club).

Notwithstanding the 1-acre recommendation, some municipalities utilize a smaller format, especially those situated in densely populated areas (refer to the Berwyn case study included or City of Chicago neighborhoods) where land values are at a premium.

## Location

Dog Parks 101 published in August

2008 by Parks and Recreation Business magazine (Glasser, 2008), states that in addition to size, the site location is very important. Most people would not like a dog park in their back-yard due to noise, so choosing a location that is located away from homes is ideal. Even a buffer of the street between homes and the park could be beneficial. They recommend that an appropriate location is an existing park. This is because the site is already used for recreation, and typically spacious. A dog park does not need to be located on a perfectly flat piece of land, which makes it easier to construct and costs less.

## Construction

In addition to determining the right location, there are many other construction elements that go in to developing a dog park. Some include; fencing, ground cover, plumbing, equipment, and maintenance. There are many different options when it comes to ground cover for a dog park, as well as fencing. Ground cover, or surface material, for a dog park is usually very controversial. The choice for material varies by location, size and what works best in that park. Some of the choices of materials are pea stone, rice stone, stone dust (granite), sand, mulch, woodchips, mulch, dirt, real grass, and artificial grass/turf. The Stanton Foundation's *Surface Material Dog Park Guide* (Stanton Foundation, 2017) thoroughly explains each material in detail.

Pea stone is usually no bigger than one-half inch, and has smooth edges due to a tumbling process. Pea stone can move a lot based on the level of activity on the surface, typically it is for low intensity, informal, pavement surfaces. It can sometimes be hard for smaller dogs to find balance on an unlevel surface for their small paws.

Rice stone is a processed stone similar in size to a grain of rice. Its size helps keep it in place though movement of dog activity. Rice stone might create irritation in large dogs if it gets in between their paws.

Stone dust is composed of hard stones such as granite, that are sent through a rock crusher. It can be spread, and compacted to create a denser surface, but can still be disturbed with high traffic and movement. Stone dust might need to be raked to maintain its formation, and it does not drain well.

Mulch and wood chips are similar in composition and use in a dog park. Both are created through tree clippings, and create a soft surface. These materials need to be refreshed and replaced often because they are very absorbent. Without proper maintenance, fungus will have the proper climate to grow, which would cause many health and environmental issues.

Sand and dirt are also similar because they can be very loose materials. After wet weather, they can be problematic creating a muddy surface for users.

Natural grass is a very popular surface for larger dog parks. With heavy activity in a smaller area, the grass can quickly become worn out.

Artificial grass, or turf, is produced with the intention to mimic natural grass. It is more popular in small parks or urban settings due to lack of space and high costs. It is weather resistant and typically soft for dog paws. There are several companies that specialized in artificial grass for animals.

Each material has its pros and cons, and the choice is unique to every climate and park. The most popular ground cover material in this area is natural grass, size permitting. Stone dust, and turf are also great ground cover options if natural grass is unavailable.

### Fencing

A very important aspect of dog parks is the fencing. The American Kennel Club recommends that a fence is four-feet to six-feet in height, as previously mentioned, in order to keep dogs from jumping over. In addition, the fence should be buried deep enough so that toys will not go under, and so dogs cannot dig a hole out of the park. Double-gate entrances are essential to prevent dogs from accidentally running out.

There should be multiple double-gate entrances that are ten-feet (Dog-On-It-Parks, 2012), and they should not be located in the corner of the park in order to reduce the risk of another dog intimidating one entering its new surroundings. The gates should also be accessible by large maintenance equipment like lawn mowers. To keep park designs consistent, the Brookfield Park Design Guidelines recommend a black chain-link fence that is PVC coated with a knuckle top and bottom.

### Equipment & Furniture

Dog parks are similar to regular playgrounds, in that they are for dogs to play freely. Exercise and agility equipment can make dog parks more popular and better destinations. Equipment should be 15 to 25 feet apart, and can be randomly scattered around the park to allow for multiples users. To combat against corrosive elements such as dog urine, the equipment and furniture should be made with rust-proof material such as HDPE plastic, aluminum, and stainless steel. Benches and shade are features that shape the experience at a dog park. Dog owners can socialize at tables and benches while their dogs play. During hot weather, many dogs can quickly become overheated, as well as their owners. Shade from trees or created by shelters can also be features to include. The Village's 2015 Park Design Guideline includes benches and trash cans for consistent Brookfield park design, shown below. Water features can also be included in dog parks. This include a drinking

fountain for dogs as well as a water feature for dogs to play in. This furniture and equipment should be properly installed to ensure safety for dogs and park users.

### Maintenance

With any park comes maintenance, and for a dog park, specific attention needs to be paid to waste removal, ground cover care, and regulation. Upon determination of ground cover material, Village staff would need to develop proper maintenance procedures. For example, natural grass would require regular trimming and upkeep, whereas artificial grass would require cleaning and rinsing, as well as installation of a drainage and plumbing system. Any of the rock materials, mulch, sand, and woodchips, would need to be refreshed and supplied with more material periodically.

### Waste Stations

One of the most important aspects of a dog park is pet waste removal. It is imperative that owners are cleaning up after their dogs to keep the park looking nice, and prevent the spread of disease. Waste stations are typically provided at parks and come in varying designs. Some come with

a sign, bag dispenser, and garbage can. Some are just the sign and bag dispensers. The garbage cans that come with these stations do not hold a lot, and would need to be changed frequently.

Many other municipalities have a park district that can handle the high demand of many locations.

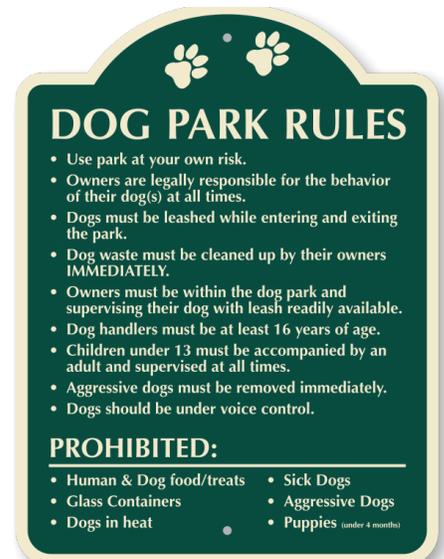

Unfortunately, because Brookfield does not have a park district or fully staffed department, all the work would likely fall onto the Department of Public Works. Since they maintain all other duties for the Village, a garbage waste station that needs to be changed every day is not feasible. Other structures to consider are a 64-gallon garbage tote that can be picked up weekly with the rest of the waste receptacle bins.

### User Fees

In order to keep maintenance running, there needs to be a funding source. Many dog parks charge users an annual permit fee to use the park. Some parks only allow residents to obtain a user fee, or permit. Many charge a higher rate for non-residents and additional dogs. These fees help defray the costs of maintenance of the park, if there are enough park users. In addition to funding, user permits help regulate park users and dogs. In most cases, proof of dog inoculations are required to obtain a permit. Making sure that only healthy dogs access the park, will keep it safe for all.

### Rules

Rule signs needs to be displayed at parks to help guide everyone how the park operates. Rules are specific to each dog park and municipality. For example, if the dog park is located within an existing park, keeping general rules consistent is important, especially for park hours. Most dog parks require users and dogs to wear and display permits and tags to make sure they are allowed to participate.

*Dog park rule sign example. From Dog poop signs.com for \$52.*

To ensure a higher level of safety, dogs known for being aggressive are typically not allowed in dog parks, and dogs in the park who become aggressive or agitated, must leave. Rules for children in the park widely vary. Many parks do not allow children at all, while others allow children only under adult supervision because they want to include everyone in the community. Arguably the most important rule is that owners MUST clean up after their dogs.

## **Berwyn- Karban Dog Park**

Karban Dog Park, located in the City of Berwyn and maintained by the Berwyn Park District, is Berwyn's first off-leash dog park area. The park provides benches, a water fountain, and waste bags, which is overseen 3-4 times per week by the park district. Karban Dog Park users are required to obtain a permit which is \$35/year for one dog, \$5 for each additional dog, up to three total dogs, and only available to Berwyn residents. It is about 9,000 sq. ft. (0.2 acres), grassy lot surrounded by a black metal fence, with an electric gate accessible only by key ID. The permit application can be found in the Appendix of this report. The full application includes the park application, park waiver and release, and list of all park rules. For residents to obtain the permit, they must show proof of inoculations by a veterinarian, and dog must display a city license tag and rabies tag. Owners must also display, or wear, their permit at all times while in the park.

## **Forest Park Dog Park**

The Village owned this land that was already a fenced-in grassy area, with a 4-foot, black chain-link fence. They added a second gate to create the double-date entry, four benches, a water fountain, and a waste bag dispenser. The size of this park is about 16,000 sq. ft. (0.4 acres). The Park District of Forest Park maintains the park, and enforces an annual dog park license for park usage. It is \$10/year for one dog, \$2 for each additional dog, up to three total dogs, for Forest Park residents. For non-residents it is, \$50/year for the first dog, \$5 for each additional dog up to 3 dogs. Dogs must wear their tags at all times, and owners must display their permit while at the dog park.

*Pocket Park for Pups, Queen Creek, AZ*

## **Pocket Park for Pups**

Another dog park examined was Pocket Park for Pups in Queen Creek, Arizona (Pocket Park For Pups, n.d.). This 1-acre park features a large open space for dogs to play and run. They also offer a separate area for smaller dogs, a drinking fountain, and temporary amenities and equipment. This park is composed of natural grass, and surrounded by a gravel perimeter. Despite the climate being different than Illinois, this park is a great example.

# Location

Taking all of the best practices into consideration, locations for a possible dog park in Brookfield were considered. This section of the study was challenging because Brookfield is landlocked, and as such there is not a lot of available, unused, open space. Respondents of the public survey also shared locations where they might like to see a park. The top choices from the survey, in order, were Ehlert Park, Kiwanis Park South, Forest Preserve District of Cook County, and Madlin Park.

## Jaycee-Ehlert Park

The most popular location choice among survey respondents for a fenced-in dog park was Jaycee-Ehlert Park. This entire park is around 33 acres, and currently has several baseball fields, soccer fields, a skate park, playground, basketball court, tennis courts, volleyball, a splash pad, fitness equipment, picnic shelter, and multiple parking lots. Upon visiting the site, and through public input, it is clear that there is underutilized space in the park that could be repurposed into a fenced dog park. Since Ehlert Park is so large, there are two possible sites for the dog park located on the northwest area of the park. Site 1 is located on the corner of Shields Avenue and Elm Avenue, where the tennis courts and basketball court are currently located. Currently the tennis courts are in poor condition and underutilized. This location of the park would be an acre in size, which would make it a great size for an ideal park. The second site is also located in the northwest corner of Ehlert Park, in the corner of Elm Avenue and Congress Park Avenue. This location is currently grass with no determined use, a size of half an acre.

## Forest Preserve District of Cook County

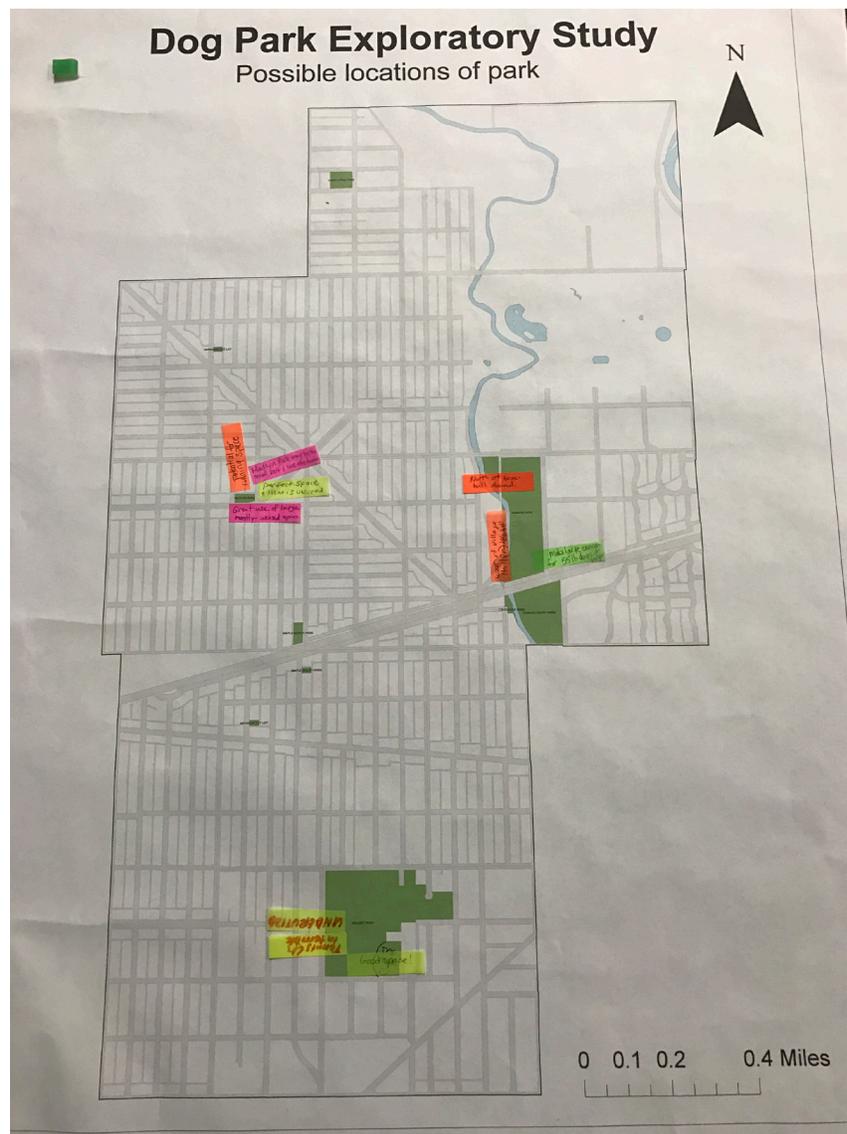

Village staff assessed the land that the Forest Preserve District of Cook County owns because it was the largest in size. The particular location of the forest preserve is at the corner of Forest Avenue and 29th Street. This clearing in the forest is nearly 5 acres in size which would also offer plenty of space for multiple dogs to interact and play. The site is near residential homes, but it is across the street, which creates a buffer, and would be surrounded by trees. This site does not have parking and parking would not easily added. After reviewing FPDCC'S website and speaking with a FPDCC Planner, it was clear that the forest preserve is not interested in developing additional off-leash dog parks. The webpage for new amenities, facilities, and infrastructure states, "There are currently no plans to create additional off-leash dog areas, though requests for improvements to existing off-leash dog areas will be considered." Therefore, the Forest Preserve is not currently a viable option for a dog park in Brookfield at this time.

## Madlin Park

Madlin Park is located at the corner of Madison Avenue and Lincoln Avenue. It is currently an open field over half an acre (0.6) in size, which is less than ideal based on the American Kennel Club's standards. There is no parking available, other than on-street parking used by home owners, but very accessible by walking or bicycling. Madlin Park is located in the center of a residential district, with streets surrounding all sides creating a buffer between the park and the homes. S.E. Gross Middle School, located down the street, occasionally uses this lot for outdoor recreational activities for the students.

## Kiwanis Park South

Kiwanis Park South was another option that many survey respondents thought might be a good location. It is located just south of Kiwanis Park and Village Hall, along Arden and Southview Avenues. The entire park is a half acre in size, which would be a small dog park if the entire tree-covered area was used. Since Brookfield does not have a lot of open space, repurposing a large natural habitat such as Kiwanis Park South is not something the Village and community are likely to do in the near future.

# Conceptual Designs

# Cost Analysis

As part of the cost analysis, it is important to recognize that all of the previously mentioned possible park locations are currently Village property. If a property become available that meets the recommendations, the Village might consider purchasing it for use. While developing a fenced-in dog park there are many other costs to consider such as fencing of the perimeter of the park, equipment, waste management, and construction costs.

There are several different types of fencing that would work well for a dog park, as described in the best practices section. A fence around the perimeter of the park with double gate entry, possibly electronic key entry, varies in cost based on linear footage, and height. Based on the recommended fence height, this cost analysis is based on a five-foot fence. An average chain link or metal fence is \$5- \$15 per foot. Aluminum fencing is about \$20-\$30 per foot. Wrought iron fencing is one of the costlier materials at \$25- \$100 per foot. As recommended in the 2015 Park Design Guidelines, black chain-link fencing would keep a consistent appearance throughout Brookfield Parks, and it is durable without being cost prohibitive. For around 900 linear feet of fencing with 2 double gates, the estimate is around \$25,000.

*Wrought iron*

*Aluminum*

*Chain link*

Below are pictures with additional park equipment with their prices from Dog-On-It-Parks.

*Stump jumps \$900*

*Spray Hydrant \$1,000*

*Agility Course \$6,000*

*Drinking Fountain \$3,000*

Waste stations are absolutely necessary in dog parks. Three waste stations with signage and bag dispensers are around \$141 each, and \$504 total. Bags need to be replenished, usage of the park will determine how many to buy and how often. A box of 2,000 single roll dog waste bags is \$70. If Brookfield uses current 64-gallon garbage totes, there would be no additional cost for bins, liners, or removal. These costs are based on Dog-On-It-Parks.

Depending on the location, plumbing, electric, and drainage might need to be brought to the site and installed. This can be quite costly because it requires large equipment to tear up the ground, and potentially part of the street. The two locations in Ehlert Park would not have access to plumbing in the park. There are bathrooms and water fountains located near the concessions building.

The total cost estimate for a 900-foot fenced in park with benches, agility equipment, sign waste stations is roughly \$32,000. If more funding is available, the Village might even consider bringing water to the site for fountains inside the park.

Cost Type	Estimate
Fencing	\$25,000
Agility Course	\$6,000
Stump Jumps	\$1,000
Waste Station	\$504
Bag Refills	\$70
<b>TOTAL</b>	<b>\$32,574</b>

# Findings and Recommendations

As an exploratory study, this report only summarizes the key research for a dog park, and does not provide a detailed implementation plan. Accordingly, it should simply be used as a guide for future plans of a park. Based on the information presented in this exploratory study, it is recommended that the Village of Brookfield consider the implementation of a community dog park based upon a) further dialogue with Village advisory bodies and Village policymakers and b) detailed analysis in conjunction with the 2018 or 2019 capital improvement program (CIP).

On balance, the findings of this feasibility study show that this initiative would be highly beneficial to the community, because it would assist the Village in reaching its goals laid out in the 2020 Master Plan, as well as the Brookfield Open Space Plan. Through public participation, it is clear that many Brookfield residents would be in favor of a dog park, and would use it regularly. Moreover, a properly designed dog park would deliver community benefits while limiting the financial and nuisance costs to non-dog owners- especially if a financing approach is developed that combines grant funding with user fees to avoid impacting the general fund, while creating a buffer to offset impacts on adjacent residences.

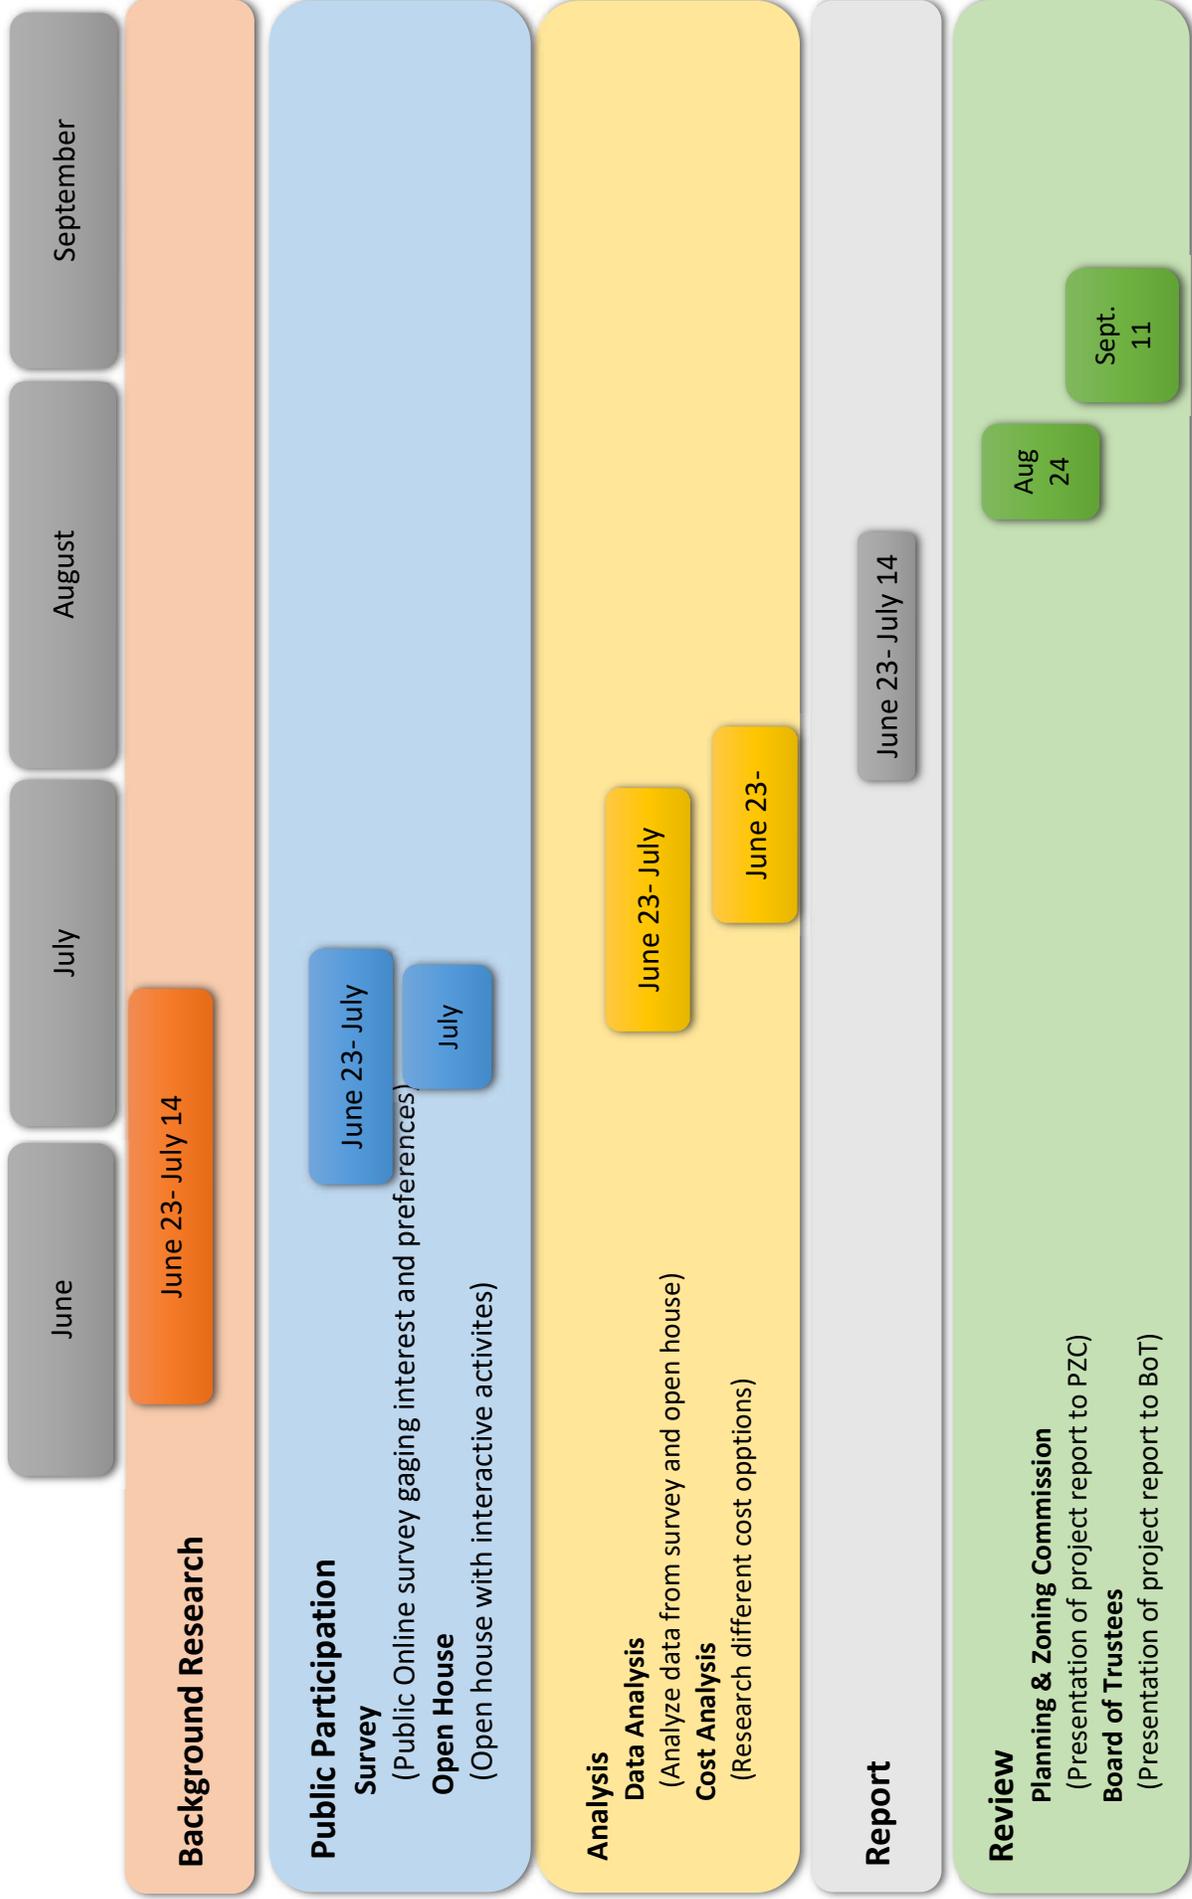

Park designs and equipment depend on site location and size. It is the recommendation that Ehlert Park or Madlin Park are the most feasible locations in Brookfield at this time. They both offer the most space for the park throughout the Village, and are already known for recreational uses. Bicyclists, pedestrians, and cars can easily access these locations.

The funding for a dog park would need to be determined long before a plan of action is created. There are several dog park related grants the Village could apply for. Additional funding could come from resident fundraising, user fees, public/private partnerships, and donations. Moreover, a dog park does not need to have every amenity available right from the start. This can be an on-going process, as funding becomes available.

## Brookfield Dog Park Feasibility Survey

According to the American Kennel Club, a dog park is a public, typically fenced park where people and dogs can play together. These parks offer dogs off-leash play areas where the dogs and their owners can enjoy socializing with other canines and owners. The Village of Brookfield is conducting a study to assess the feasibility of a dog park in the community.

Your participation in this survey is voluntary. This survey will take approximately 5-10 minutes. Individual responses will be kept confidential.

If you have any questions about the survey or study, please contact Community and Economic Development Intern Kendra Kuehlem at [kkuehlem@brookfieldil.gov](mailto:kkuehlem@brookfieldil.gov) or Village Planner Emily Egan at [eeqan@brookfieldil.gov](mailto:eeqan@brookfieldil.gov).

Do you own a dog?

- Yes
- No

Should a dog park with an enclosed fence be implemented in the Brookfield parks system?

- Yes
- No

At what location would you like to see a dog park constructed?

- Kiwanis Park South
- Madlin Park
- Forest Preserve of Cook County
- Ehlert Park
- Other: \_\_\_\_\_

How often would you use this dog park?

- Daily
- A few times per week
- Once per week
- Once per month
- Once per Year
- Never

Have you ever experienced conflict with an off-leash dog in Brookfield, or neighboring area?

- Yes
- No

# Brookfield Dog Park Feasibility Survey

Are there other features not listed that you believe are important?

Your answer \_\_\_\_\_

Many successful dog parks have a committed team of volunteers who spend time and energy educating dog owners, cleaning up after irresponsible people, and overall keeping an eye on the park. Would you be interested in being a part of this dog park committee?

- Yes
- No

Do you currently visit any dog parks? If so, where?

- Forest preserve
- Neighboring community
- Unofficial dog park as open space
